

Smowltech

smowl computer
monitoring user's
guide

Through this manual, we will explain how the monitoring tool, **smowl computer monitoring (cm)**, works and how it is launched from a course, exam or activity.

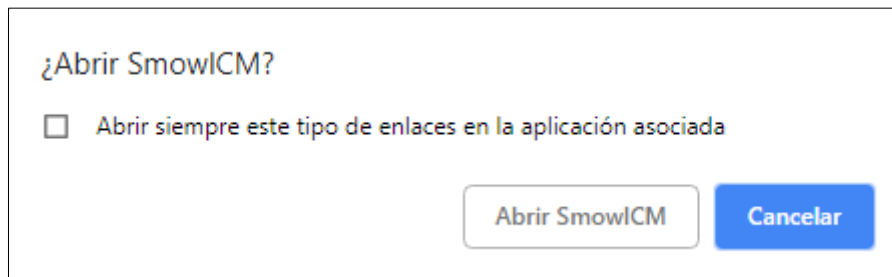

1. Behaviour.....	3

Google Chrome	6

1. Behaviour

When we enter the exam or activity, the tool will be launched automatically. The browser will ask us for permission to launch the application. Depending on the browser, the permission message is different, we can see the different messages in **Annex 1**.

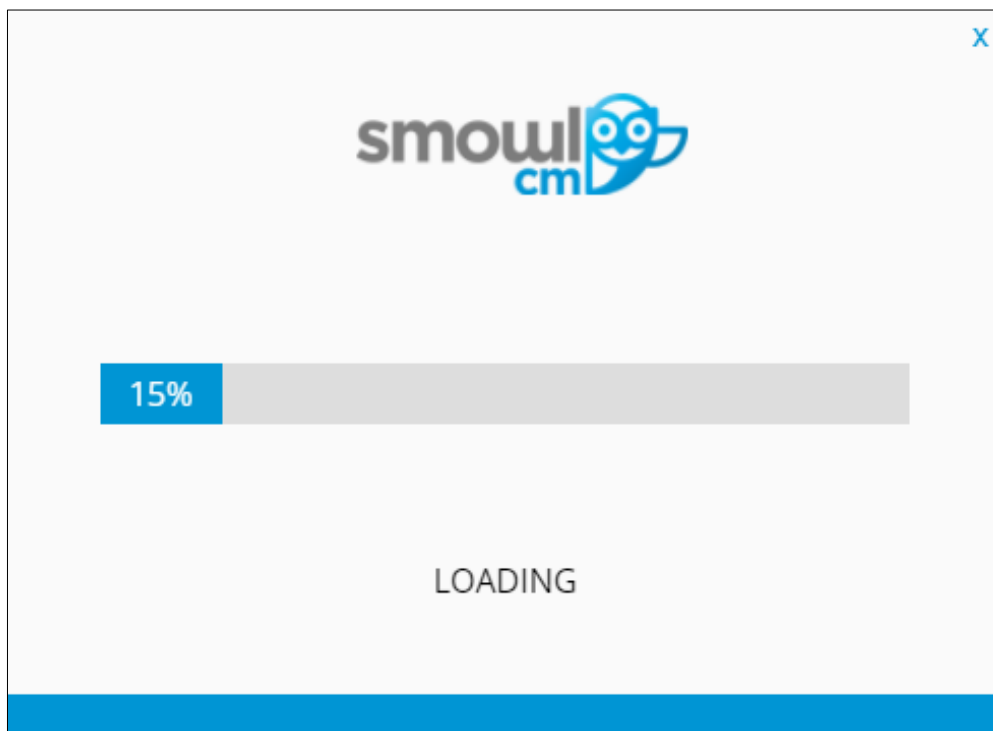

ATTENTION!

It is recommended to select the *checkbox* that asks us if we want to always open this type of links in the associated application. In any case, we must answer affirmatively to the question to launch **smowl cm**.

Google Chrome message in spanish

After the tool is launched, the system will begin to load as we can check in the following image.

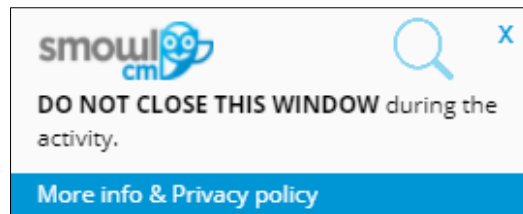

smowl cm loading page

When the tool has been fully loaded, a small window will open that will remain open during monitoring. That window will appear in the lower right part of the screen and it is very important not close it during the course of the activity. Once finished, the student can close it. If the student does not close it, the system will close automatically once the duration of the exam is exceeded.

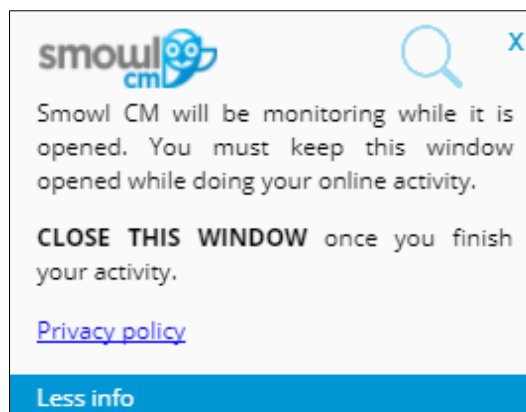

ATTENTION!

It is very important that we do not close the **smowl cm** window during the development of the activity or exam that is being monitored. Once finished, we can close the tool window.

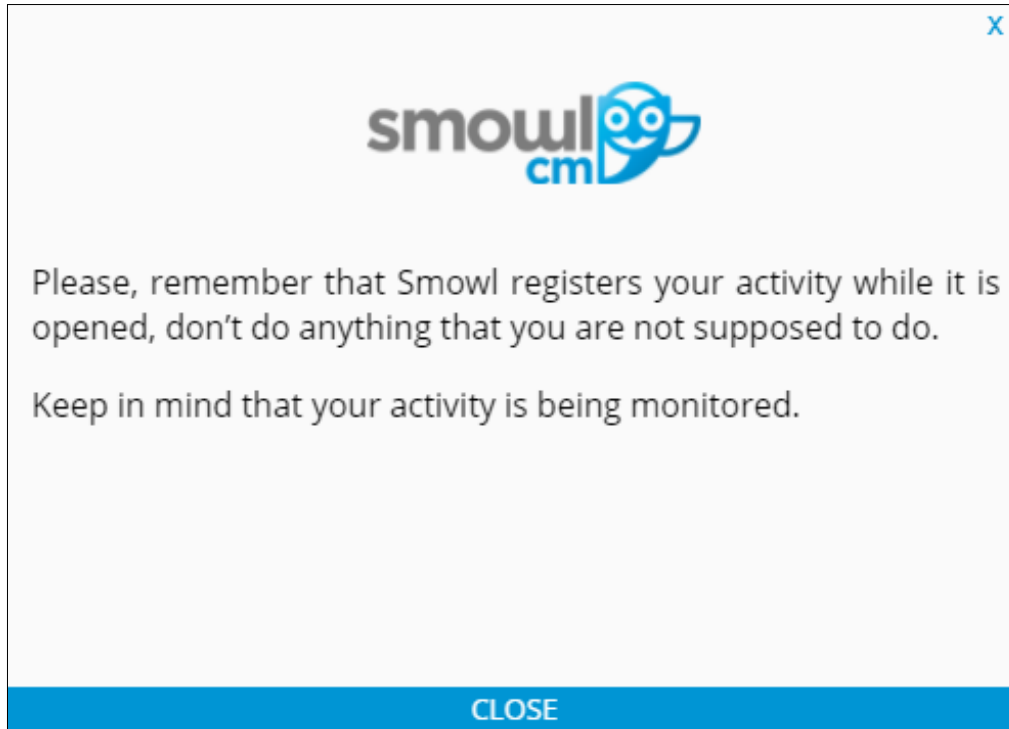

smowl cm working window

If we click on "More info", the window will be expanded to show us more information about the program behaviour and the link to the privacy policy.

More information about **smowl cm**

The first time we make a window change, the system will remind us that it is working and that all the activity is being monitored so that we can take it into account.
